Script	3	56 KB
Stylesheet	2	15 KB
Document	1	2 KB
Other	1	1 KB
Image	0	0 KB
Media	0	0 KB
Third-party	3	171 KB

Eliminate render-blocking resources — Potential savings of 0 ms		^
Resources are blocking the first paint of your page. Consider delivering critical JS/CS3 JS/styles. <u>Learn more</u> .	S inline and deferring all no	n-critical
	Show 3rd-party re	esources (1)
URL	Size	Potential Savings
css/font-awesome.min.css (stackpath.bootstrapcdn.com)	14 KB	950 ms
/style.css (sheltered-ridge-53450.herokuapp.com)	1 KB	270 ms
Properly size images		^
Serve images that are appropriately-sized to save cellular data and improve load time.	. <u>Learn more</u> .	
Defer offscreen images		^
Consider lazy-loading offscreen and hidden images after all critical resources have finiteractive. <u>Learn more</u> .	ished loading to lower time	to
Minify CSS		^
Minifying CSS files can reduce network payload sizes. <u>Learn more</u> .		
Minify JavaScript		^
Minifying JavaScript files can reduce payload sizes and script parse time. <u>Learn more</u>		
Efficiently encode images		^
Optimized images load faster and consume less cellular data. <u>Learn more</u> .		
Serve images in next-gen formats		^
Image formats like JPEG 2000, JPEG XR, and WebP often provide better compression faster downloads and less data consumption. <u>Learn more</u> .	n than PNG or JPEG, which	means
Enable text compression		^
Text-based resources should be served with compression (gzip, deflate or brotli) to mi more.	nimize total network bytes.	<u>Learn</u>
Preconnect to required origins		^
Consider adding `preconnect` or `dns-prefetch` resource hints to establish early conne origins. <u>Learn more</u> .	ections to important third-pa	arty
Server response times are low (TTFB) — Root document took 140 ms		^
Time To First Byte identifies the time at which your server sends a response. Learn mo	ore.	

Avoid multiple page redirects Redirects introduce additional delays before the page can be loaded. Learn more. Preload key requests Consider using `k rel=preload>` to prioritize fetching resources that are currently requested later in page load. Learn more. Use video formats for animated content Large GIFs are inefficient for delivering animated content. Consider using MPEG4/WebM videos for animations and PNG/WebP for static images instead of GIF to save network bytes. Learn more Avoids enormous network payloads - Total size was 186 KB Large network payloads cost users real money and are highly correlated with long load times. Learn more. Show 3rd-party resources (3) **URL** Size 112 KB ...fonts/fontawesome-webfont.woff2?v=4.7.0 (stackpath.bootstrapcdn.com) /npm/chart.js@2.8.0 (cdn.jsdelivr.net) 44 KB 14 KB ...css/font-awesome.min.css (stackpath.bootstrapcdn.com) /index.js (sheltered-ridge-53450.herokuapp.com) 7 KB /db.js (sheltered-ridge-53450.herokuapp.com) 4 KB 2 KB https://sheltered-ridge-53450.herokuapp.com /style.css (sheltered-ridge-53450.herokuapp.com) 1 KB 1 KB /api/transaction (sheltered-ridge-53450.herokuapp.com) Uses efficient cache policy on static assets - 0 resources found A long cache lifetime can speed up repeat visits to your page. Learn more. Avoids an excessive DOM size - 43 elements A large DOM will increase memory usage, cause longer style calculations, and produce costly layout reflows. Learn more. Statistic Element Value **Total DOM Elements** 43 7 Maximum DOM Depth <+h> Maximum Child Elements <form> 6 User Timing marks and measures Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. Learn more.

JavaScript execution time - 0.4 s

Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. <u>Learn more</u>.

Show 3rd-party resources (1)

URL	Total CPU Time	Script Evaluation	Script Parse
Other	583 ms	88 ms	2 ms
/npm/chart.js@2.8.0 (cdn.jsdelivr.net)	288 ms	280 ms	7 ms

Minimizes main-thread work - 0.9 s

Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. <u>Learn more</u>

Category	Time Spent
Script Evaluation	375 ms
Other	353 ms
Rendering	104 ms
Style & Layout	22 ms
Parse HTML & CSS	16 ms
Script Parsing & Compilation	11 ms

Minimize third-party usage - Third-party code blocked the main thread for 0 ms

Third-party code can significantly impact load performance. Limit the number of redundant third-party providers and try to load third-party code after your page has primarily finished loading. <u>Learn more</u>.

Third-Party	Size	Main-Thread Blocking Time
Bootstrap CDN	126 KB	0 ms
JSDelivr CDN	44 KB	0 ms
Heroku	16 KB	0 ms

These checks highlight opportunities to improve the accessibility of your web app. Only a subset of accessibility issues can be automatically detected so manual testing is also encouraged.

Additional items to manually check (11) — These items address areas which an automated testing tool cannot cover. Learn more in our guide on <u>conducting an accessibility review</u>.

The page has a logical tab order	
Tabbing through the page follows the visual layout. Users cannot focus	s elements that are offscreen. Learn more.
Interactive controls are keyboard focusable	
Custom interactive controls are keyboard focusable and display a focus	us indicator. <u>Learn more</u> .
Interactive elements indicate their purpose and state	
Interactive elements, such as links and buttons, should indicate their selements. <u>Learn more</u> .	state and be distinguishable from non-interactive
The user's focus is directed to new content added to the page	
If new content, such as a dialog, is added to the page, the user's focus	s is directed to it. <u>Learn more</u> .
User focus is not accidentally trapped in a region	
A user can tab into and out of any control or region without accidental	ly trapping their focus. <u>Learn more</u> .
Custom controls have associated labels	
Custom interactive controls have associated labels, provided by aria-la	abel or aria-labelledby. <u>Learn more</u> .
Custom controls have ARIA roles	
Custom interactive controls have appropriate ARIA roles. <u>Learn more</u> .	
Visual order on the page follows DOM order	
DOM order matches the visual order, improving navigation for assistive	e technology. <u>Learn more</u> .
Offscreen content is hidden from assistive technology	
Offscreen content is hidden with display: none or aria-hidden=true. Le	<u>arn more</u> .
Headings don't skip levels	
Headings are used to create an outline for the page and heading levels	s are not skipped. <u>Learn more</u> .
HTML5 landmark elements are used to improve navigation	
Landmark elements (<main>, <nav>, etc.) are used to improve the key</nav></main>	board navigation of the page for assistive technolo

[role]s have all required [aria-*] attributes Some ARIA roles have required attributes that describe the state of the element to screen readers. Learn more. Elements with an ARIA [role] that require children to contain a specific [role] have all required children. Some ARIA parent roles must contain specific child roles to perform their intended accessibility functions. Learn more. [role]s are contained by their required parent element Some ARIA child roles must be contained by specific parent roles to properly perform their intended accessibility functions. Learn more. [role] values are valid ARIA roles must have valid values in order to perform their intended accessibility functions. Learn more. Buttons have an accessible name When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. Learn more. Background and foreground colors have a sufficient contrast ratio Low-contrast text is difficult or impossible for many users to read. Learn more. Document has a <title> element The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. Learn more. [id] attributes on the page are unique The value of an id attribute must be unique to prevent other instances from being overlooked by assistive technologies. Learn more. <html> element has a [lang] attribute If a page doesn't specify a lang attribute, a screen reader assumes that the page is in the default language that the user chose when setting up the screen reader. If the page isn't actually in the default language, then the screen reader might not announce the page's text correctly. Learn more. <html> element has a valid value for its [lang] attribute Specifying a valid BCP 47 language helps screen readers announce text properly. Learn more. Form elements have associated labels Labels ensure that form controls are announced properly by assistive technologies, like screen readers. Learn more. [user-scalable="no"] is not used in the <meta name="viewport"> element and the [maximum-scale] attribute is not less than 5. Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. Learn more. Cells in a element that use the [headers] attribute refer to table cells within the same table.

Screen readers have features to make navigating tables easier. Ensuring `` cells using the `[headers]` attribute only refer to other cells in the same table may improve the experience for screen reader users. <u>Learn more</u>.

> elements and elements with [role="columnheader"/"rowheader"] have data cells they describe.

Screen readers have features to make navigating tables easier. Ensuring table headers always refer to some set of cells may improve the experience for screen reader users. <u>Learn more</u>.

Not applicable (21)

[accesskey] values are unique

Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. <u>Learn</u> more.

[aria-*] attributes match their roles

Each ARIA `role` supports a specific subset of `aria-*` attributes. Mismatching these invalidates the `aria-*` attributes. <u>Learn more</u>.

[aria-*] attributes have valid values

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid values. Learn more.

[aria-*] attributes are valid and not misspelled

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid names. Learn more.

<audio> elements contain a <track> element with [kind="captions"]

Captions make audio elements usable for deaf or hearing-impaired users, providing critical information such as who is talking, what they're saying, and other non-speech information. <u>Learn more</u>.

The page contains a heading, skip link, or landmark region

Adding ways to bypass repetitive content lets keyboard users navigate the page more efficiently. Learn more.

<dl>'s contain only properly-ordered <dt> and <dd> groups, <script> or <template> elements.

When definition lists are not properly marked up, screen readers may produce confusing or inaccurate output. Learn more.

Definition list items are wrapped in <d1> elements

Definition list items ('<dt>` and `<dd>`) must be wrapped in a parent `<dl>` element to ensure that screen readers can properly announce them. <u>Learn more</u>.

<frame> or <iframe> elements have a title

Screen reader users rely on frame titles to describe the contents of frames. Learn more.

Image elements have [alt] attributes

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. <u>Learn more</u>.

<input type="image"> elements have [alt] text

When an image is being used as an `<input>` button, providing alternative text can help screen reader users understand the purpose of the button. <u>Learn more</u>.

Presentational elements avoid using , <caption> or the [summary] attribute.

A table being used for layout purposes should not include data elements, such as the thor caption elements or the summary attribute, because this can create a confusing experience for screen reader users. <u>Learn more</u>.

Links have a discernible name

Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. <u>Learn more</u>.

Lists contain only elements and script supporting elements (<script> and <template>).

Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output. <u>Learn more</u>.

List items () are contained within or parent elements

Screen readers require list items (') to be contained within a parent '' or '' to be announced properly. <u>Learn</u> more.

The document does not use <meta http-equiv="refresh">

Users do not expect a page to refresh automatically, and doing so will move focus back to the top of the page. This may create a frustrating or confusing experience. <u>Learn more</u>.

<object> elements have [alt] text

Screen readers cannot translate non-text content. Adding alt text to `<object>` elements helps screen readers convey meaning to users. <u>Learn more</u>.

No element has a [tabindex] value greater than 0

A value greater than 0 implies an explicit navigation ordering. Although technically valid, this often creates frustrating experiences for users who rely on assistive technologies. <u>Learn more</u>.

[lang] attributes have a valid value

Specifying a valid <u>BCP 47 language</u> on elements helps ensure that text is pronounced correctly by a screen reader. <u>Learn more</u>.

<video> elements contain a <track> element with [kind="captions"]

When a video provides a caption it is easier for deaf and hearing impaired users to access its information. Learn more.

<video> elements contain a <track> element with [kind="description"]

Audio descriptions provide relevant information for videos that dialogue cannot, such as facial expressions and scenes. <u>Learn more</u>.

	Does not use HTTP/2 for all of its resources — 5 requests not served via HTTP/2		
	HTTP/2 offers many benefits over HTTP/1.1, including binary headers, multiplexing, and server push. <u>Learn more</u> .

robots.txt is valid

If your robots.txt file is malformed, crawlers may not be able to understand how you want your website to be crawled or indexed. <u>Learn more</u>.

Image elements have [alt] attributes

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. <u>Learn more</u>.

Document has a valid rel=canonical

Canonical links suggest which URL to show in search results. Learn more.

Progressive Web App

These checks validate the aspects of a Progressive Web App. Learn more.

Fast and reliable

Page load is fast enough on mobile networks

A fast page load over a cellular network ensures a good mobile user experience. Learn more.

▲ Current page does not respond with a 200 when offline

If you're building a Progressive Web App, consider using a service worker so that your app can work offline. Learn more.

start url does not respond with a 200 when offline No usable web app manifest found on page.

A service worker enables your web app to be reliable in unpredictable network conditions. Learn more.

Installable

Uses HTTPS

All sites should be protected with HTTPS, even ones that don't handle sensitive data. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. Learn more.

Does not register a service worker that controls page and start url

The service worker is the technology that enables your app to use many Progressive Web App features, such as offline, add to homescreen, and push notifications. <u>Learn more</u>.

Web app manifest does not meet the installability requirements Failures: No manifest was fetched.

Browsers can proactively prompt users to add your app to their homescreen, which can lead to higher engagement. <u>Learn</u> more.

PWA Optimized

Does not redirect HTTP traffic to HTTPS If you've already set up HTTPS, make sure that you redirect all HTTP traffic to HTTPS in order to enable secure web features for all your users. Learn more. Is not configured for a custom splash screen Failures: No manifest was fetched. A themed splash screen ensures a high-quality experience when users launch your app from their homescreens. Learn more. Does not set a theme color for the address bar. Failures: No manifest was fetched. The browser address bar can be themed to match your site. Learn more. Content is sized correctly for the viewport If the width of your app's content doesn't match the width of the viewport, your app might not be optimized for mobile screens. Learn more. Has a <meta name="viewport"> tag with width or initial-scale Add a `<meta name="viewport">` tag to optimize your app for mobile screens. Learn more. Contains some content when JavaScript is not available Your app should display some content when JavaScript is disabled, even if it's just a warning to the user that JavaScript is required to use the app. Learn more. Does not provide a valid apple-touch-icon For ideal appearance on iOS when users add a progressive web app to the home screen, define an 'apple-touch-icon'. It must point to a non-transparent 192px (or 180px) square PNG. Learn More. Additional items to manually check (3) - These checks are required by the baseline PWA Checklist but are not automatically checked by Lighthouse. They do not affect your score but it's important that you verify them manually.

Site works cross-browser

To reach the most number of users, sites should work across every major browser. Learn more.

Page transitions don't feel like they block on the network

Transitions should feel snappy as you tap around, even on a slow network. This experience is key to a user's perception of performance. <u>Learn more</u>.

Each page has a URL

Ensure individual pages are deep linkable via URL and that URLs are unique for the purpose of shareability on social media. Learn more.
